1. Summary

This product bulletin announces the availability of SnapManager® 5.0 for Microsoft® Office SharePoint® Server (SMMOSS) for production release and first customer ship. This release extends the power of SnapManager to Microsoft Office SharePoint Server 2007 SP1 storage optimization technology called external blob storage (EBS) to dramatically improve scalability and performance. It enables SharePoint administrators to transparently manage SharePoint data across storage tiers (SAN and NAS) while providing application-consistent backup and restore without the need for extensive storage experience or storage administrator assistance. It also enables SharePoint administrators to implement a policy-based archiving solution for reducing storage cost and enables collaboration services team to consolidate data from multiple collaboration applications into SharePoint for better control and search improving collaboration experience.

SnapManager leverages the NetApp technology stack to automate and simplify the complex and time-consuming manual backup, restore, and recovery of SharePoint data. It integrates with Microsoft storage technologies, enabling IT organizations to scale their SAN storage infrastructure, meet stringent SLA commitments and compliance needs, and improve the productivity of both SharePoint Server administrator and collaboration services team across the enterprise.

Key SnapManager features include:

- Tight integration with Microsoft Office SharePoint Server (MOSS) EBS technology to improve scalability and performance for large SharePoint deployments
- Automation and management of the backup, restore, recovery, data migration, and archiving processes to easily perform routine data management tasks without specialized training or assistance from storage administrators

2. What's New?

SnapManager 5.0 for Microsoft Office SharePoint Server (SMMOSS) includes:

- **Storage optimization:** Policy-based approach to externalizing SharePoint BLOB content out of SQL Server onto SMB (CIFS shares) for better scalability, performance, and efficiency
- **Backup and recovery of SharePoint 2007 SP1 databases in an EBS environment:** Ability to provide application-consistent backup and restore and transparent management of SharePoint 2007 SP1 content distributed across storage (SAN and NAS) tiers
- **Data migration:** Ability to move content from SMB (CIFS shares) and Exchange public folders into SharePoint for consolidation of collaboration data spread across the enterprise for better control, search, and collaboration
- **Archiving and compliance:** Policy-based approach to moving SharePoint content between storage tiers for reducing storage cost while providing the ability to meet stringent compliance needs

Product Availability

This product is currently available on NOW.

Product Licensing

Note that the MIGRATOR and ARCHIVER parts are NOT available for storage system-based licenses. The MIGRATOR is for data migration and is available by capacity, 100GB to 5000GB. The ARCHIVER module is available by number of Web front ends (WFEs) deployed in the SharePoint environment that require archiving functionality. For both MIGRATOR and ARCHIVER, entitlements will be granted that will allow downloading the corresponding license file from the NOW download software section.

7. Regulatory Compliance

Products need to be validated against the NetApp Safety/EMI Regulatory Compliance List prior to order submission. The list is available at **PartnerCenter Compliance Information**. This is required to make sure that products are being sold only in the countries in which NetApp has received regulatory compliance certification.

8. Warranty and Service

Standard software warranty and services apply.
