 - Select the INF file in Win7_S08R2_x64
- Windows Server 2008 with 32bits Version
 - Select the INF file in Vista_S08_x86
- Windows Server 2008 with 64bits Version
 - Select the INF file in Vista_S08_x64
- Windows Server 2008R2 with 64bits Version
 - Select the INF file in Win7_S08R2_x64
- Windows 8/8.1 32bits Version
 - Select the INF file in Win8_x64
- Windows 8/8.1 64bits Version
 - Select INF file in Win8_x86
- Windows 2012/2012R2
 - Select INF file in Win2012

Important Notice:

- XDDM and WDDM Driver Selection for Win7/Vista/2008/2008R2 OS.

- In general, we strongly recommend our customers to use XDDM driver, not WDDM driver. ASPEED's WDDM driver is only for the mother board which supports multi-adapters function. Multi-adapter function means the mother board has 2 different VGA chips (or add-on cards) on-board, one is the 3rd party VGA chip, another is ASPEED VGA chip, and the 3rd party VGA chip only provides WDDM driver.
- ASPEED Graphics WDDM Driver Limitation on Vista/Windows7/Server2008/Server2008R2
 - It is non-WHQL certified driver because ASPEED VGA is a 2D VGA, it cannot meet the WHQL requirement of WDDM driver which requires 3D VGA function.
 - Because it is non-WHQL certified driver, it may meet some compatible issues with some specific applications
- ASPEED Graphics WDDM Driver Limitation on Windows 8/2012:
 - Not support the modes with different display frequency
