1. Summary

This product bulletin announces the availability of Single Mailbox Recovery 5.0 (SMBR) for production release and first customer ship, paving the way for Microsoft® Exchange administrators to easily sift through NetApp Snapshot™ copies of their Microsoft Exchange databases.

SMBR integrates with NetApp and third-party technology to allow administrators to quickly and accurately retrieve individual mailboxes, e-mails, and even attachments using a powerful set of advanced search criteria.

2. What's New?

SMBR V5.0 is the first product to ship support for Single Mailbox Recovery Administrative Server (SMBR AS V1.0) that includes:

- **Server Configuration:** You can monitor the active connections and available services, change ports, restart or stop server, and elect to be discovered in Active Directory.
- **Mailbox Permissions Service:** In order to reinforce your internal corporate security policies, you can restrict access in Single Mailbox Recovery 5.0 to mailboxes contained within private EDB Exchange mailbox stores based on your authority.
- **Application Auditing Service:** Activities performed as part of Single Mailbox Recovery 5.0 and Single Mailbox Recovery ExtractWizard operations, as well as activities within Single Mailbox Recovery Administrative Server, are logged as part of an “audit trail.”

You can manage these services using the Single Mailbox Recovery Management Console, which is the main interface for using this product.

SMBR V5.0 adds support for Exchange 2007 SP1.

The following new platform support has been added to SMBR V5.0 and SMBR AS 1.0

- Windows Server 2008 Standard, Windows Server 2008 Data Center, Windows Server 2008 Enterprise
- Windows Vista Business, Windows Vista Ultimate, Windows Vista Enterprise
- The following virtual environments are supported:
 - VMWare Server 1.0x, VMWare Workstation for Windows v6.0x
 - Microsoft Virtual Server 2005 R2
 - Microsoft Virtual PC 2007
