
gFiler™ Gateway Series—Data ONTAP™ 6.5.3

Documentation Roadmap

This document lists the hardware and software manuals that are available for the Data ONTAP 6.5.3 release for the gFiler for IBM®, Hitachi Data Systems®, HP® and, Hitachi®, Limited storage subsystems. Online versions of the manuals are available on the product CD-ROM and at the NOW site (<http://now.netapp.com/>).

For setting up the gFiler and storage subsystem

Read this...	To learn about...
gFiler Gateway Series: Data ONTAP 6.5 Release and Description page	New features, enhancements, and known issues.
<i>Getting Started with the gFiler for Hitachi, Limited</i>	What a gFiler is, platforms that are supported with the SANRISE storage subsystems, configuration rules for LUNs and ports, and configuration and installation information that is specific for your storage systems. Use this customized guide in conjunction with the gFiler hardware and software setup and installation guides.
<i>Getting Started with the gFiler for Hitachi Data Systems</i>	What a gFiler is, platforms that are supported with the HDS storage subsystems, configuration rules for LUNs and ports, and configuration and installation information that is specific for your storage systems. Use this customized guide in conjunction with the gFiler hardware and software setup and installation guides.
<i>Getting Started with the gFiler for HP</i>	What a gFiler is, platforms that are supported with the HP XP storage subsystems, configuration rules for LUNs and ports, and configuration and installation information that is specific for your storage systems. Use this customized guide in conjunction with the gFiler hardware and software setup and installation guides.
<i>Getting Started with the gFiler for IBM</i>	What a gFiler is, platforms that are supported with the IBM storage subsystems, configuration rules for LUNs and ports, and configuration and installation information that is specific for your storage systems. Use this customized guide in conjunction with the gFiler hardware and software setup and installation guides.
<i>gFiler Gateway Series Hardware Installation Guide</i>	How to connect the gFiler and the storage subsystem.
<i>gFiler Gateway Series Software Setup, Installation, and Management Guide</i>	How to perform initial setup and installation of Data ONTAP software on a new gFiler. You can also read this guide to learn about tasks involved with managing gFilers on an ongoing basis, for example, for managing volumes and LUNs and unburdening gFilers overloaded with requests.
<i>gFiler Gateway Series Data ONTAP Upgrade Guide</i>	How to upgrade Data ONTAP software on the gFiler and how to revert to an earlier release.

For setting up and using Data ONTAP features

Read this...	To learn about ...
<i>System Administration Storage Management Guide</i>	How to configure, operate, and manage NetApp® appliances that run Data ONTAP software.
<i>System Administration File Access Management Guide</i>	How to configure and manage different file access protocols supported by Data ONTAP software.
<i>System Administration MultiStore™ Management Guide</i>	How to administer the Data ONTAP vFiler™ feature.
<i>System Administration Network Management Guide</i>	Configuring and managing the network-related features of Data ONTAP software.
<i>System Administration Data Protection, Online Backup, and Recovery Guide</i>	How to back up and recover data using Data ONTAP online backup and recovery features.
<i>System Administration Data Protection, Tape Backup, and Recovery Guide</i>	How to back up and recover data using Data ONTAP tape backup and recovery features.
<i>Commands: Manual Page Reference</i>	The Man pages for Data ONTAP commands.
<i>System Administration Block Access Management Guide for iSCSI</i>	How to use a gFiler as an iSCSI target in a TCP/IP network.

For gFiler hardware diagnostics and maintenance

Read this...	To learn about...
<i>gFiler Gateway Series Hardware Maintenance Guide</i>	How to monitor, troubleshoot, and maintain a gFiler.
<i>NetApp Hardware Diagnostics Guide 4.2</i>	Testing field replaceable units and diagnosing and correcting system hardware problems.

Where to find more information
