

NetApp® NFS Plug-in 1.1.0 for VMware® VAAI Release Notes

The NetApp NFS Plug-in for VMware vStorage APIs for Array Integration (VAAI) is supported on clustered Data ONTAP 8.1 or later, and Data ONTAP 8.1.1 or later operating in 7-Mode.

For installation and configuration instructions, see *Installing the NetApp NFS Plug-in for VMware VAAI*.

Supported features

The following new features are supported with the plug-in:

- IPv6 in clustered Data ONTAP 8.2.1 or later, and Data ONTAP 8.1.1 or later operating in 7-Mode
- Stateless-ready installation of the vSphere Installation Bundle (VIB) when deploying this version of the plug-in on the VMware ESX hosts
- ESX version 6.0
You must download the appropriate NFS plug-in version based on the ESXi host version.

Known limitations

You should familiarize yourself with the known limitations of the plug-in:

- VMware extended statistics are not supported in this version of the plug-in.
- A VAAI-assisted cloning operation can occur only when the source and destination datastore are in the same SVM or in the same 7-Mode storage system.
This limitation only applies to releases earlier than clustered Data ONTAP 8.2.
